

Aqua Indicator Gravure Ink

1) Summary

Aqua Indicator Gravure Ink contains pigment that reacts to the presence of water by exhibiting a color change. Its colorless, slightly white appearance turns blue when exposed to water.

2) Nature

Name : Water Reactive Flexographic Ink
Appearance : Pale Grey Liquid
Specific Gravity : 0.8 – 1.3
Flash Point : 28°C (UN No,1210, Flammable Liquid, PG:III)

3) Color

Dark Blue

*Other colors are currently under development

4) How To Use

< Applications >

Paper and film

< printing cylinder >

*The amount of ink that the printing cylinder delivers depends on the cell's number, size, geometry, and applications.

5) Precautions

- Store in a cool place away from direct sunlight and humidity.
- Please refer to the SDS for more details.
