

ROQ IMPRESS

UNDER HIGHLIGHTS

UP TO 300 P/H WITH  
2 HEAT PRESSES AND  
500 P/H WITH 3-4 HEAT  
PRESSES

QUICK SETTINGS,  
ALLOWING ADJUSTMENT  
OF PRESSURE,  
TEMPERATURE, AND  
PRESSING TIME

COMPLETELY AUTOMATED  
WORKFLOW, REQUIRING  
ONLY 1 OPERATOR

COMPLETELY  
PROGRAMMABLE FROM  
THE CONTROL PANEL,  
INCLUDING RECIPE  
SELECTION

INCLUDES A PRESSURE  
UNIFORMIZATION  
FUNCTION APPLIED BY  
THE HEAT PRESS

DTF APPLICATION  
ROQ IMPRESS

Transfers have been a method of garment decoration used for many years. However, in recent times, with companies making it easier to order custom transfers and the innovative DTF options, their growth has been rapid.

Our mission is to simplify our customers' daily operations, which is why we developed a unique DTF application solution: the ROQ IMPRESS with automated workflow.

This solution allows a single operator to load garments onto

the **ROQ IMPRESS** while the attachments automate transfer application, film removal, and unloading of the garment without any human intervention.

All of this is made possible by incorporating the **ROQ FEED**, which precisely places the transfer onto the garment; the **ROQ PEEL**, which removes the transfer film after pressing; and the **ROQ PULL**, which removes the finished garment from the **ROQ IMPRESS** and stacks it automatically.

\* In these variants, the ROQ PULL is not considered, as it is only possible to attach 2 accessories.

\*\* Considering a maximum production of 500 pieces/hour and an operating pressure of 3.5 bar

ROQ IMPRESS  
ATTACHMENTS

TRANSFER LOADING  
**ROQ FEED**

It is an accessory for automatic transfer loading that complements the ROQ IMPRESS. Once configured, it places the thermal transfer or DTF in the desired position, thus eliminating the need for any human intervention.

**TECHNICAL SPECIFICATIONS**

**Air Consumption**

@6 bar work pressure, 7 bar supply pressure [l/min]/[ft<sup>3</sup>/h]\*

4,55/9,7

**Electric Consumption**

@3X230V[Amp]

1,1

**Total Weight**

[Kg]/[Pounds]

153/337

\* Considering a maximum production of 500 pieces/hour.

TRANSFER FILM  
REMOVAL  
**ROQ PEEL**

This accessory was developed to automate and make the removal of the protective film from thermal or DTF transfers more efficient. It allows for adjusting the speed and stroke length according to the types or sizes of transfer sheets.

**TECHNICAL SPECIFICATIONS**

**Air Consumption**

@6 bar work pressure, 7 bar supply pressure [l/min]/[ft<sup>3</sup>/h]\*

4,2/8,9

**Electric Consumption**

@3X230V[Amp]

5,3

**Total Weight**

[Kg]/[Pounds]

120/265

\* Considering a maximum production of 500 pieces/hour.

**IMPORTANT**

To ensure automatic removal operation, it is necessary to maintain a minimum distance of 40 mm between the edge of the image and the thermal transfer sheet.

REMOVES AND  
STACKS THE  
GARMENTS  
**ROQ PULL**

This accessory allows for the automatic removal and stacking of pieces, eliminating the need for an operator. Once integrated with the ROQ IMPRESS and configured, the ROQ PEEL removes the piece from the ROQ IMPRESS pallet using grippers, stacking them on a platform that lowers as it accumulates pieces. It is necessary to remove the stack when the platform is full or when the previously defined number of pieces is reached.
